
1 Q. **Tab 12; Volume II: Install Asset Health Monitoring System**

2 Is Hydro aware of any other utilities or jurisdictions that have installed Asset Health
3 Monitoring Systems?

4

5

6 A. Manitoba Hydro has developed a design for a modern unit control and monitoring
7 system. In review of a presentation on this system, the monitoring aspects of their
8 standard design are similar to that described in the report on Asset Health

9 Monitoring System for Upper Salmon. Modern hydraulic generating unit control

10 systems include the features and capabilities in the proposed Upper Salmon Health

11 Monitoring System. The Upper Salmon Asset Health Monitoring project will allow

12 Hydro to achieve the benefits of continuous trend monitoring without the added

13 expense of a control system replacement.
