

1 Q. With reference to Hydro’s response to NP-NLH-115, is it possible that Hydro could
2 take delivery of Recapture Energy and/or pre-commissioning energy from the
3 Muskrat Falls Generating Station, for transmission to the Island System during the
4 OPDA period, that would not be considered by Hydro to be displacing thermal
5 generation at Holyrood? If so, in what circumstances and by what criteria would
6 such a determination be made, and would factor “H” costs accrue in the OPDA for
7 such deliveries?

8
9

10 A. Hydro’s proposal assumes that all Recapture Energy and/or commissioning energy
11 delivered to the Island Interconnected System will result in thermal displacement
12 for the system. Hydro’s response to NP-NLH-115 was prepared on that premise.
