

1 Q. Is Hydro prepared to work with Newfoundland Power to place a consumer friendly  
2 insert in customers' bills or online, as the case may be, to describe fully and  
3 completely the Net Metering Program, including the cost of the program, together  
4 with practical examples so that ratepayers can be completely informed as to  
5 possible savings under the Net Metering Program.

6

7 What agreement is in place with Newfoundland Power and Newfoundland and  
8 Labrador Hydro re sharing the maximum 5 MW available under this program?  
9 Please elaborate as to how this will work.

10

11

12 A. Hydro is prepared to work together with Newfoundland Power to develop an  
13 appropriate Net Metering communications plan to ensure information is clearly and  
14 effectively communicated to all customers. If the Application is approved, relevant  
15 information from the Net Metering Program will be detailed on Hydro's website  
16 including; application form(s), application processes and guidelines, and technical  
17 guidelines.

18

19 Management of the provincial limit of 5 MW will involve a coordinated approach  
20 between Newfoundland Power and Hydro. Customers that meet all requirements  
21 to participate in the Net Metering Program will be permitted to participate until the  
22 provincial limit is met. The determination of when the provincial limit is fully  
23 subscribed to will be determined based upon the total of provincial net metering  
24 installed generation capacity and the capacity submitted on all pending installations  
25 within the Province.
