

1 Q. Further to the response to PUB-Nalcor-071, concerning electrification potential,
2 does Newfoundland Hydro have any further information concerning the possible
3 timing of conversion to electric heat, in whole or in part, concerning the heating
4 end uses at the facilities listed in Table 1 of that response?

5

6

7 A. Decisions with respect to both the approval and timing of conversion projects to
8 electric heat for the public administration sectors included in Table 1 of Nalcor's
9 response to PUB-Nalcor-071 come under the purview of the Provincial Government
10 and the public administrative bodies involved with those facilities. It is Hydro's
11 understanding that the Government of Newfoundland and Labrador and public
12 administrative bodies are continuing to evaluate fuel conversion opportunities. At
13 the present time, Hydro has no further information with respect to the firm timing
14 of any fuel conversion projects to be undertaken by the public administration
15 bodies in the province.
