
1 Q. Does Newfoundland Hydro have any estimation of the amount of time it would
2 take, under “base” and “accelerated” rollout scenarios, for installation of meters
3 (across each sector – residential, commercial, industrial) that would allow for
4 implementation of time-varying rates (i.e., at least hourly consumption
5 differentiation)? If so, please provide such information. If not, please provide any
6 current Newfoundland Hydro insights into what the timeframes could be for such
7 an implementation, and how it could vary across the different sectors.

8

9

10 A. Please refer to Nalcor’s response to PUB-Nalcor-127.
