

1 Q. In response to PUB-Nalcor-074 and PUB-Nalcor-083 Nalcor provided three load
2 forecast scenarios based on different price assumptions. An analysis of those
3 results indicates an overall price elasticity of approximately -0.30. Has there been
4 any analysis of the specific end-use load responses to price changes (e.g., space
5 heating, lighting, hot water)? If so, please provide that information.

6

7

8

9 A. No, there has not been an analysis completed by Hydro of specific end-use load
10 responses to price changes.
