

- 1 Q. Please clarify to what extent loads greater than 77 MW at Happy Valley-Goose Bay
2 are compatible with reliable electric service. More specifically, please describe the
3 consequences of transient or short-term loads that exceed this level, in increments
4 of 1 MW, taking into account existing diesel generation, utility-scale energy storage,
5 curtailment options and any other demand management resources available to
6 Hydro.
- 7
8
- 9 A. Please refer to the response for question 9 in “Attachment 2 – Responses to
10 Labrador Interconnected Group Questions”, submitted by Hydro on March 6, 2018.
