

- 1 **Q:** Page 33 of the Brattle Group report notes that “*our experience is that the*
2 *equivalent peaker method has more commonly found use in thermal generation-*
3 *dominated systems.*” Is the Brattle Group aware of any hydro generation
4 dominated system using the equivalent peaker method? If yes, what is the
5 proportion of the cost classified using the equivalent peaker method?
6
- 7 A. No, we are not aware of any hydro generation dominated system using the
8 equivalent peaker method. If such example exists, it is our opinion that they are
9 isolated examples and are not commonly used for such units.
