

1 Q. **Reference: Slide 26**

2 Please provide the incremental financial impacts on existing customers in Labrador East, in  
3 Labrador West, and (post-Muskrat) on the Island from a large cryptocurrency customer locating  
4 in a place where it can take significant quantities of Labrador power at firm service. Please also  
5 provide the same analysis at interruptible service. In this analysis, please assume that the  
6 power supplies would otherwise be available for export under the most reasonable long-term  
7 export pricing and path.

10 A. The incremental financial impacts on existing customers in Labrador East, in Labrador West, and  
11 (post-Muskrat) on the Island from firm or interruptible cryptocurrency customer would be  
12 dependent on the quantity of incremental load and detailed information of the interconnecting  
13 customer. As a result, the provision of the quantification of such impacts is not possible without  
14 performing a system impact study based on these specific details.
