

1 Q. **Reference: Application, Page 7, Lines 22 - 24**

2 Please identify the new 69 kV, 138 kV and 230 kV transmission lines that Hydro has constructed  
3 in the past 25 years, providing the transmission line designation, total kilometres constructed  
4 per transmission line, total cost of construction and resulting unit cost per kilometre to  
5 construct.

6

7

8 A. Table 1 provides the transmission lines that have been constructed in the past 25 years.

**Table 1: Transmission Lines Construction in the Past 25 Years**

Line	Year	Voltage (kV)	Length (km)	Type	Total Cost	Unit Cost (\$/km)
TL 266	2018	230	18	Steel	\$27 Million	\$1.5 Million
TL 267	2017	230	210	Steel	\$252 Million	\$1.2 Million
TL 263	2002	230	76	Wood/Steel	N/A	-
TL 264	2006	69	44.5	Wood	N/A	-

9 Please note that the costs associated with TL 263 and TL 264 are not available due to the age of  
10 the files and the available cost breakdown. All costs on record for these projects reflect the  
11 overall project and do not provide a breakdown for the line components separately. These  
12 projects also included the development and implementation of associated terminal stations and  
13 communications thereby adding to the overall cost.
