

1 **Q. Reference: Application, Schedule 1, pages 3 and 4.**

2 Will Hydro be limiting the availability of non-firm energy to the TwinCo and Recapture blocks?  
3 Over both short and long-term horizons, how are Muskrat Falls assets expected to be used to  
4 provide non-firm service?

5

6

7 **A.** At this time, the TwinCo<sup>1</sup> and Recapture Blocks are sufficient to supply the amount of capacity  
8 that Newfoundland and Labrador Hydro (“Hydro”) is currently proposing to make available on a  
9 non-firm basis to customers on the Labrador Interconnected System.

10 In the event that future transmission expansions enable increased deliveries to non-firm  
11 customers that exceed the TwinCo and Recapture Blocks, Hydro would propose the charge to  
12 supply the non-firm energy would continue to be based on the incremental cost to supply the  
13 non-firm energy. Please refer to Hydro’s response to NP-NLH-012 of this proceeding.
