

1 Q. Does the Cumulative Present Worth calculation for fuel savings take into  
2 consideration that the Hydro has been running the diesel units to provide energy to  
3 the system due to the low hydrology scenario?

4

5

6 A. The fuel savings from purchasing the diesel units are not considered in the  
7 Cumulative Present Worth (CPW) (economic analysis) until after June 1, 2016.  
8 Therefore, whether or not Hydro has been running the diesel units to provide  
9 energy to the system due to the low hydrology scenario has no effect on the CPW  
10 calculations.
