- 5   A. In 2014, Hydro was able to acquire and place into service a 120 MW CT within one  
6   year. This represented a unique and extraordinary effort, so we would not suggest on  
7   planning a similar timeframe in the future. In addition, the machine was purchased  
8   from storage and did not have to be newly manufactured. A cycle of perhaps 2-3  
9   years is more realistic, but the Hydro effort indicates that such a schedule can be  
10  expedited if necessary.
