

1 Q. **Requests for information in relation to Hydro’s Monthly Energy Supply Report for the Island**
2 **Interconnected System for May 2020, filed with the Board on June 16, 2020 (the “May 2020**
3 **Monthly Energy Supply Report”).**

4 At page 2, lines 31-34 of the May 2020 Monthly Energy Supply Report, Hydro states as follows:

5 “Figure 1 plots the 2019 and 2020 storage levels, maximum operating level storage, and the 20-
6 year average aggregate storage for comparison. Hydro has established minimum storage limits
7 to April 30, 2021 in consideration of potential delays in the availability of the Labrador-Island
8 Link (“LIL”) to deliver energy to the Island Interconnected System. This will help ensure sufficient
9 storage to reliably serve customers should the LIL continue to be delayed beyond the fall of
10 2020.”

11 With reference to IC-NLH-001 and IC-NLH-002, please provide all criteria used by Hydro for
12 establishing the minimum storage limit, including all documentation of the present criteria and,
13 if the criteria has changed over time, all documentation of the previous criteria used.

14

15

16 A. Please refer to Newfoundland and Labrador Hydro’s (“Hydro”) response to PUB-NLH-139 which
17 documents the criteria used by Hydro for establishing the minimum storage limits.
