

- 1 **Q. What additional costs does Newfoundland Power anticipate for metering. What**
2 **percentage of Newfoundland Power customers currently have bi-directional**
3 **metering installed? Who will pay for any additional metering costs, who will be**
4 **responsible for installation and who will own the metering installation?**
5
- 6 A. Newfoundland Power currently does not have any bi-directional meters installed on
7 customers' services. Newfoundland Power will own and be responsible for the
8 installation of the required bi-directional metering. The customer will be responsible for
9 the extra cost associated with the purchase and installation of the bi-directional metering.
10 For general service customers the extra cost is anticipated to be approximately \$200. For
11 domestic customers the additional cost would be between \$20 and \$50.
