

1 Q. On page iv of Navigant's Executive Summary, it states:
2

3 *We recommend that the customer's net consumption be billed using the*
4 *tariffs which would normally apply to a customer of the same size, type*
5 *and location and that the customer be compensated for excess power at*
6 *the same rate, unless the Government chooses to introduce a different*
7 *rate for power produced from renewable sources.*
8

9 **Please confirm that using the retail rate, as provided for in the provincial Net**
10 **Metering Policy Framework, for the annual settlement of credits would be more**
11 **reflective of Navigant's recommendation.**
12

13 A. Use of the retail rate for the annual settlement of excess credits would be more reflective
14 of Navigant's recommendation.
15

16 However, as explained in the response to Request for Information PUB-NP-001,
17 settlement of excess credits at retail rates would *not* meet the requirements of Section 3 of
18 the *Electrical Power Control Act, 1994* or the attributes of a sound utility rate structure.
